

GVM Global Vehicle Motor Power Series

Permanent Magnet (PMAC) Motor
for Mobile Systems

ENGINEERING YOUR SUCCESS.

WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety, and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based on data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.
- The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

WARNING

This product can expose you to chemicals including nickel and nickel compounds, which are known to the State of California to cause cancer. For more information go to www.p65warnings.ca.gov

General Description

High power Permanent Magnet AC motors (PMAC) offer the best solution to meet the requirements of vehicle duty performance. With a ten year legacy and thousands of units sold in the GVM series, the high power density and speed capabilities of Parker GVM Power Series motors combined with a matched inverter provide the speed and torque required to achieve breakthrough performance in a variety of vehicle platforms.

The GVM Power Series motor is a powerful choice for both on and off-road vehicles, engineered for traction and electro-hydraulic pumps (EHP) up to 409 kW peak power. The GVM provides very high efficiency, up to 2% higher versus comparable PMAC designs, enabling energy savings of up to 30% compared to induction technologies.

In addition to operating as a high-power motor, the GVM is a very high efficiency generator. A variety of available magnetic options allow for a wide range of voltage, speed, and torque requirements. The GVM family achieves high power density thanks to a patented liquid cooling system, which also results in a cleaner, less complex design.

The GVM is an example of how Parker is providing the building blocks for vehicle electrification, developing turnkey technologies that cut time to market while reducing supply chain complexity.

Applications:

- **Traction**
- **Generators**
- **Electro-hydraulic pumps**

Markets:

- **Construction**
- **Mining**
- **Material Handling**
- **Trucks**
- **Bus**
- **Agriculture**
- **Military**

And other off-highway vehicle, autonomous vehicle, and E-Mobility markets

Overview:

- Rated power up to 228 kW (continuous)
- High power density
- Peak torque up to 1430 Nm
- Rotational speed up to 8000 rpm¹
- Low inertia / high dynamic
- Low and high voltage options 24 VDC to 800 VDC
- Scalable torque with multiple magnetic lengths
- Multiple shaft options available

¹ For higher speeds, please review your application with our applications team.

RELIABILITY & DURABILITY

To ensure reliability and long life under tough conditions, the GVM motors have been put through a battery of validation tests. These tests, designed to simulate the worst conditions a vehicle would be subjected to, cover mechanical, environmental, and electrical categories. The lists below include highlights of the testing. Please contact Parker regarding specific or custom validation standards.

- Long lifetime
- Reduced downtime
- Less maintenance
- Subjected to rigorous environmental testing
- High ingress protection level available
- Ceramic bearings

"[We've] tested a lot of motors in the GVM class and the Parker GVM was clearly the best of the lot"
Engineer, scientific research facility

Testing and Validation Details:

Mechanical

- Random and swept sine vibration testing to simulate worst case fatigue exposure to SAE J1455
- Shock and vibration levels exceeding SAE J1455 for unsprung mass applications.

Environmental

- Dust and sand, and gravel bombardment to SAE J1455
- Salt Spray - Fog and Immersion to SAE J1455

Electrical

- HiPot insulation test to IEC 34-1 at $2 \times V_{RMS} + 1000 V_{RMS}$
- Insulation resistance to ISO 6469-3
- EMC emission and immunity to IEC 34-1 (motor only)

DURABILITY/RELIABILITY

are characteristics of the GVM that make it suitable for rough environments.

THAT'S 5400 TIMES
AROUND THE WORLD!

QUICK FACT:

Over 135 million road miles have been logged by Parker GVM motors since 2012.

Test standards meet
SAE J1455
for Dust, Sand, Gravel
Bombardment,
Humidity, Salt Spray
and Immersion,
Operating Temps
from -40° to 120°C,
Crash Shock,
and Vibration

EFFICIENCY

Lowering energy consumption, making the most of a battery charge, and reducing the amount of waste heat produced are design goals of any electric or hybrid vehicle project. The high efficiency of the GVM series make it a stand-out in the field of mobile duty motors.

- **Lower energy consumption for compliance with emerging energy legislations and green initiatives**
- **Up to 2% more efficient than comparable PMAC designs**
- **Operates efficiently as motor or generator for maximum energy recovery during braking and deceleration**
- **Reduced vehicle emissions for smaller CO₂ footprint**
- **Reduced battery size**
- **Extended vehicle range**
- **Lower cost of ownership over life of vehicle**
- **Reduced thermal losses allow for smaller, less expensive vehicle cooling system**
- **On electro-hydraulic systems, efficiency gains are made by allowing the use of a constant displacement pump versus variable, increasing pump efficiency**

The battery is one of the most expensive and largest components in a vehicle system, and a high efficiency motor can help optimize both battery lifetime and time between charges. This translates to more time in service and more revenue for the fleet owner.

"We've tested four different competitive products and the Parker GVM is the most efficient, and we are recommending this motor ..."

Design engineer, OEM truck manufacturer

"The GVM technology provides more value than the competition. This includes better continuous torques without oil cooling and improved efficiency at peak power."

Engineering manager, OEM bus company

EFFICIENCY

is the motor's capability to produce useful mechanical power efficiently. A more efficient motor reduces the cost to operate, runs cooler, and is better for the environment.

UP TO
2% MORE EFFICIENT THAN
COMPETITIVE MOTORS

GVM applications have reduced emissions by over 20,000 tons of CO₂

Parker's higher efficiency
GVM means a **cost reduction**
of the vehicle battery or
longer range between charges.

POWER DENSITY

Limited mounting space and the need to pack a lot of power into close quarters requires a motor design with high power density, which is defined by the amount of power (time rate of energy transfer) per unit volume. The GVM is designed to meet these criteria, providing value to the vehicle manufacturer.

- **Reduced space claim**
- **Less weight for better performance**
- **Lighter motor can provide larger payload capacity**
- **Helps vehicle designers meet packaging and performance goals**
- **Patented cooling helps achieve vehicle performance objectives**
- **Enhanced productivity in the form of higher vehicle capacity**

"The GVM space claim and power density allowed Parker to win the business and allow our customers to realize fuel savings. These motors have proven to be very reliable for nearly 135 million cumulative miles driven period"

Hybrid vehicle system company co-founder

Cooling System

- Enables high power density
- Cooling liquid: Water/Glycol 50%¹
- Circular stator comprising the cooling system can be inserted as a kit in any circular housing (Parker or customer)
- Eliminates the cooling jacket required in other motor technologies, saving weight and space
- Low pressure drop reduces power required to circulate coolant

¹ For oil cooled applications, please consult factory

POWER DENSITY

refers to the amount of power produced relative to the physical size of the motor.

**FROM
40%
TO
100%
MORE PEAK POWER
THAN COMPETITIVE MOTORS**

The high power density of the GVM saves on installation cost when compared to oil cooled motors.

**Reduced
space claim -**

Up to
66%

better power density
than competitive motors

Performance

GVM Power Series motors are designed to meet the power requirements in a wide variety of vehicle applications. The GVM has the ability to operate at different battery voltages without loss of power.

- Up to 800 VDC
- Numerous rotor lengths
- Multiple winding configurations per length

By selecting the appropriate voltage, rotor length and winding variation, the following parameters can be refined to match the vehicle's specific performance requirements:

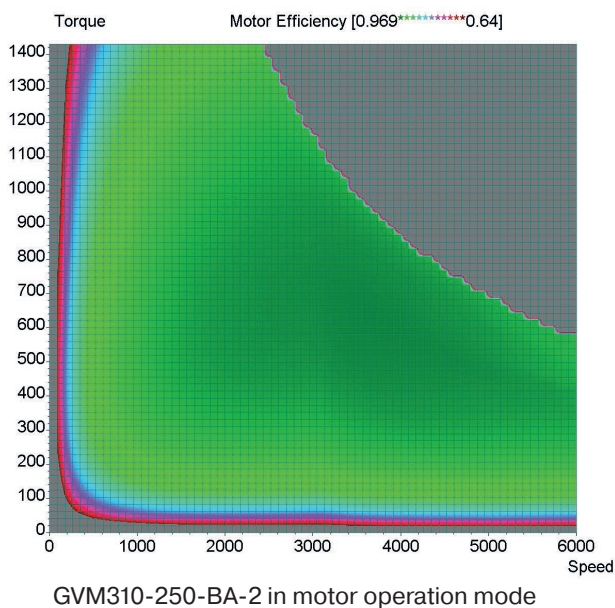

- Peak torque
- Rated speed
- Peak power
- Rated power
- Rated torque
- Maximum speed

Efficiency

Only when using the best component technology and optimal design characteristics do traction motors/generators and controllers minimize losses both during motoring and power generation (four quadrant mode) increasing vehicle range. Variable speed system allows higher efficiency even at low speed.

Typical Efficiency Maps - Battery Voltage 650 VDC

*The maximum operating speed depends on maximum BEMF accepted by the drive (values given for a Peak Voltage of 1200V)

Max. mechanical speed is 8 000 rpm.

Values in table represent GVM ratings with input cooling liquid at **65°C** (Characteristics are given for an optimal drive/motor association without any limitation coming from the drive). For alternative cooling temperatures please contact us.

Global Vehicle Inverter (GVI)

With functional safety at its very core, the second generation GVI mobile inverter provides a single-family solution for both traction and work function applications, on and off-road. All three sizes are rated up to IP6K9K and are designed for ISO26262 and EN13849 functional safety standards. Plug and socket connections on the front face simplify installation, and the comprehensive configuration software tool combined with both CANopen and J1939-76 support give system design flexibility.

	Low voltage	High Voltage

SAE Type	A	B	C	D	E	F
SAE C	127.15 G7	12	114.5	181	50	74.5
SAE D	152.55 G7	16	161.6	228.6	65	81.5

Spline Interface Data

Consult factory for wet spline option

ANSI B92.1	SAE C	SAE D
Flat root side fit	Class 5	Class 6
Number of teeth	14	13
Spline Pitch	12/24	8/16
Pressure angle	30°	30°
Base diameter (Ref)	25.663	35.745
Pitch diameter (Ref)	29.63	41.275
Major diameter (Max)	32.588	45.669
Form diameter (Max)	31.852	44.452
Minor diameter (Min)	27.610	38.252
Circular space width (Max actual)	3.426	5.095
Circular space width (Min effective)	3.325	4.986

All dimensions in mm.

GVM310 / Traction Mount (SAE 4)

Power connector option 4 - 3 x HV PowerLok™ 500A

Motor Data

Motor size	L1	L2	L3	Shaft Interface	Weight
GVM310-200	390	238	281	TB	135
GVM310-250	440	288	206	TB	158

Spline Interface Data

ANSI B92.1	Involute
Side fit	Flat Root Class 5
Number of teeth	27
Spline Pitch	16/32
Pressure angle	30°
Base diameter (Ref)	37.12
Pitch diameter (Ref)	42.863
Major diameter	44.45/44.32
Form diameter (Max)	41.17
Minor diameter	40.36
Circular tooth thickness (Max effective)	2.456
Circular tooth thickness (Min actual)	2.421
Pin diameter	3.048
Measurement over pins (Ref)	47.460/47.407

GVK Kit Motor

High level of customisation - Only for high volume OEM applications

Frameless kit motors can be the ideal solution for high volume machine designs that require high performance in small spaces. Lightweighting is an important design concept used by automotive engineers that is especially important to employ in heavy on-highway and off-highway hybrid and electric vehicle to increase range, performance, productivity and reliability.

By integrating Parker's active magnetics, and patented cooling into your mechanics you can eliminate mechanical, electrical, and cooling interfaces that reduce space claim, reduce parts, and failure modes.

Kit motors also allow for direct integration with a mechanical transmission device, eliminating parts that add size and complexity.

If you have an application in mind, our engineering team will be happy to discuss the particulars of a frameless design option.

- **Flexibility of design by using a kit version to integrate the motor into a global system**
- **Available as a potted circular stator including the cooling system**
- **Provides a customized and integrated mechanical design**
- **GVK range has the same electrical characteristics as GVM range**

Consider a kit motor for:

- Integration into axles
- Integration into transmission
- Truck
- Bus
- Construction
- Mining

Configured ePump

Configured ePumps are designed and optimized for hybrid electric and all electric mobile applications.

Configured ePumps consist of a GVM motor, directly coupled to an hydraulic pump and controlled by a high performance mobile hardened GVI inverter.

Parker's configured ePumps provide the lowest possible installed cost and highest efficiency while still maintaining superior reliability in the most demanding applications.

Thermal Management

The QDC cooler range, whether 24 VDC or 600 VDC ties in perfectly with Parker inverters and motors ensuring greatest efficiency for all electrified applications.

- 20-30% more efficient cooling matrix
- Low noise fan and fan housing
- High performance fan drive with integrated inverter
- Fan speed control from 1200 RPM to 4750 RPM
- Air free fluid
- 50-60% less space and power consumption
- Silent operation
- Compact design - low space claim

GVM Hoses

We recommend to use the Parker Multipurpose Transfer Hose - Oilpress N/L 20-30 :

Part Number			 Max. Working Pressure			 Weight	 min. Bend Radius	in Stock
	I.D. (mm)	O.D. (mm)	MPa	psi	bar	kg/m	mm	
OILPRESS N/L 20								
IH30832000/40	6	12	2.0	300.0	20	0.12	25	Y
IH30832001/40	8	14	2.0	300.0	20	0.15	35	Y
IH30832002/40	10	17	2.0	300.0	20	0.21	40	Y
IH30832003/40	13	20	2.0	300.0	20	0.26	55	Y
IH30832004/40	16	23	2.0	300.0	20	0.31	65	Y
IH30832005/40	19	28	2.0	300.0	20	0.47	80	Y
IH30832006/40	25	36	2.0	300.0	20	0.74	100	Y

GVM Fittings

To complete your installation some additional components like hose fittings, connectors, and hoses may be required. While we do not provide these items, your local Parker hose distributor can assist. Find one on www.parker.com or call (800) C-Parker.

Coolant Connections

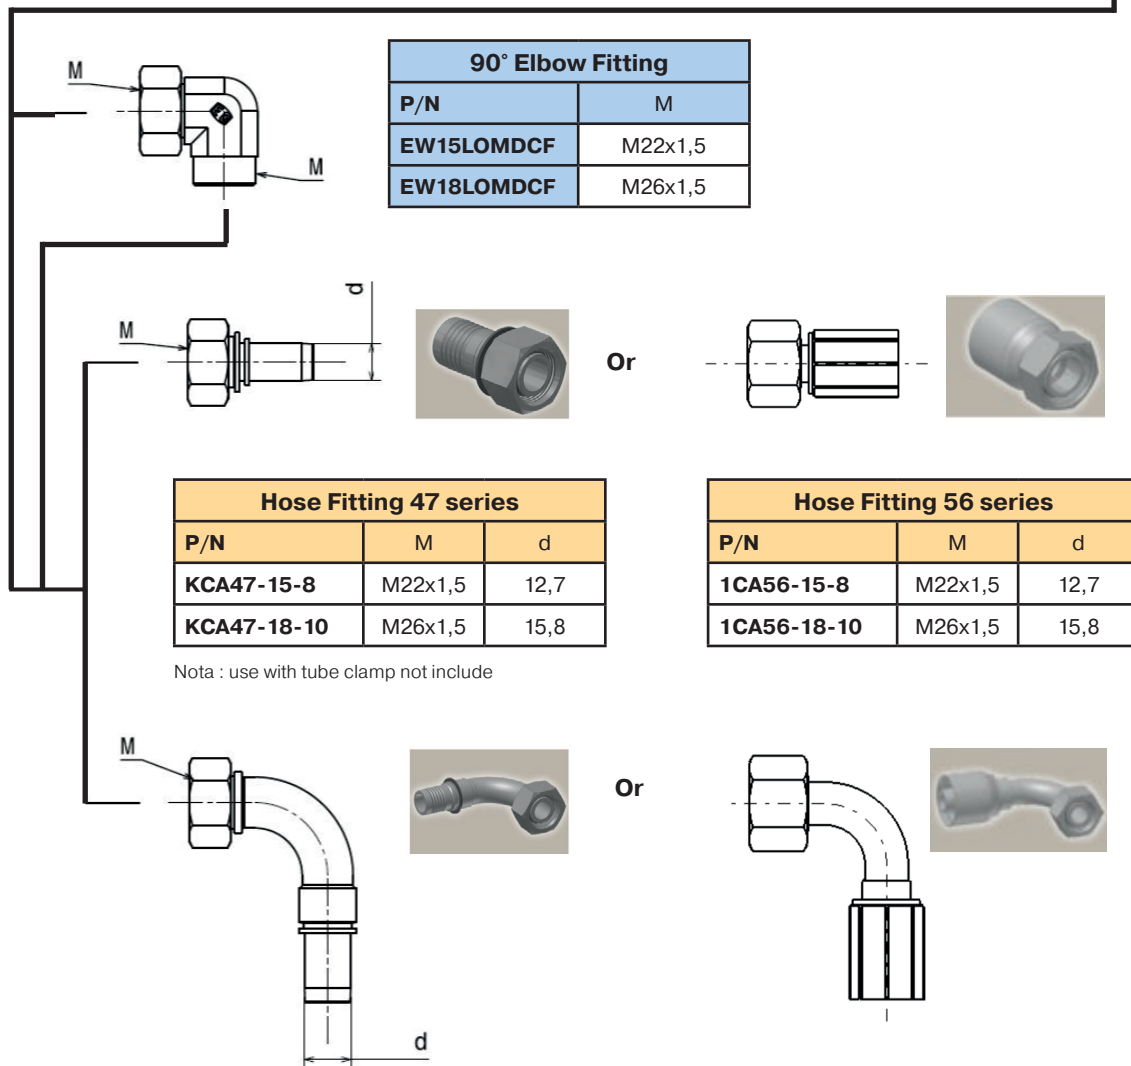

GVM210 : Coolant inlet / outlet are ORB-8 SAE J1926-1 with thread 3/4-16 UNF

GVM310 : Coolant inlet / outlet are ORB-12 SAE J1926-1 with thread 1-1/16-12 UNF

We advise to use the male stud, fittings and hose as follow :

For EO 24° cone end (DIN 3861 / ISO 8434-1) :

GVM Fittings			
Motor	P/N Fitting	T1	T
GVM210	GE15L3/4UNFOMDCF	3/4-16 UNF-2A	M22x1,5
GVM310	GE18L11/16UNOMDCF	1" 1/16-12 UN-2A	M26x1,5

Nota : use with tube clamp not include
